## Who is B-Team Corrosion Protection

Over 60,000 sqm  
rubber  
linings corrosion  
protection

Over 80,000  
sqm other  
types of  
corrosion  
protection

B-Team Corrosion Protection works to deliver optimal corrosion protection **for large companies from Romania, Europe, Turkey and Saudi Arabia**

### Our fields of expertise

We deliver complete projects so you can focus on your core business, ensuring that your plant continues to operate both economically and efficiently.

You will benefit from complete anti-corrosion protection solutions and a team of applicators with **over 15 years experience in the field**. We focus on maintaining structure integrity over time and reducing corrosion effects.

## Who is B-Team Corrosion Protection

We combine technical expertise, experience and a well trained team to provide high quality surface protection. We control the entire coating process, from our initial discussion about our clients needs, up to delivery of products and the completed coated parts.

Over 15 years experience in the field.

## Main benefits of working with us:

- **A dedicated team** of technical applicators, in numbers and specializations that match your needs
- **Adequate audit** to identify all factors that could lead to corrosion, a proposal of optimum solutions and a detailed plan to ensure the best efficiency ratio of applied materials
- Long-term infrastructure **monitoring and maintenance**
- **Health and safety standards** and the observance of environmental laws
- Timely and **complete project delivery** at competitive prices
- **Efficient protection** for both new and in-service structures

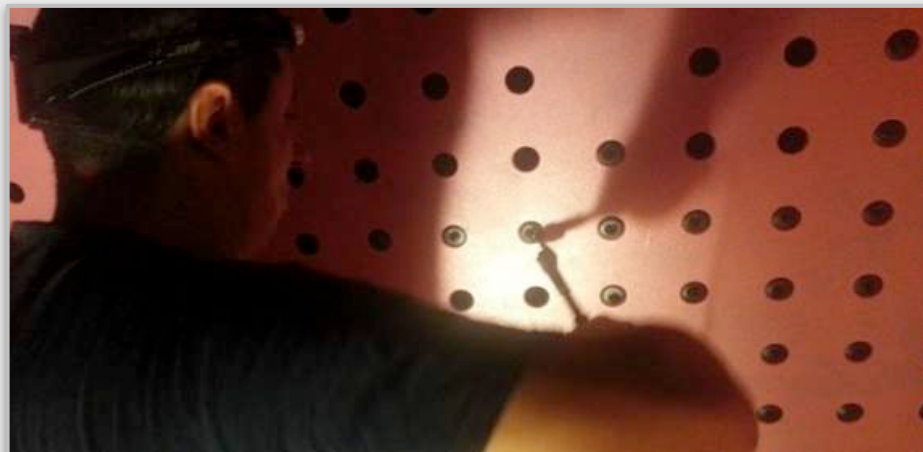

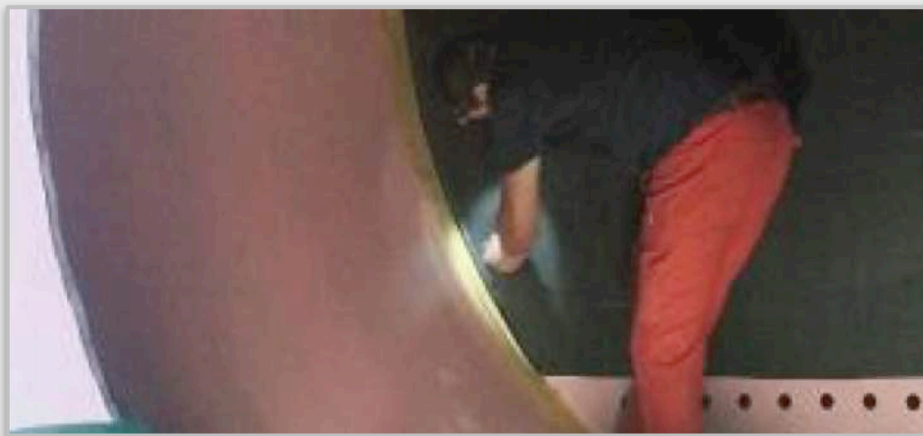

## Rubber lining services

---

We perform rubber lining applications on site and in our shop, adapted to conditions specific to each project.

With rubber linings we protect:

- storage tanks
- gas scrubbers
- pipes, valves, cocks
- fittings, wagons, chemical tankers
- flue gas desulfurization plants (FGD)
- waste incineration plants
- waste water basins, filter tanks
- soil washing plants
- drinking water treatment plants
- reaction vessel, condenser

## Acid resistant coating services

---

Depending on project needs, we apply acid-proof systems composed of:

- Rubbers and acid-proof bricks or tiles together with corresponding acid-proof mortars
- Synthetic resins lining plus acid-proof bricks/tiles and anti-acid mortars
- Special mortars and screeds

## Complex resin application

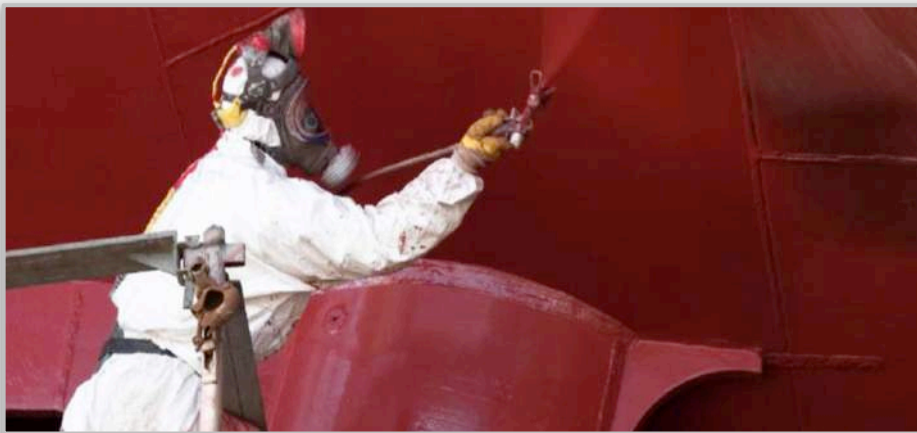

---

For resin applications, we make available for you a full flexible team, adapted to the requirements demanded by your project:

- self-leveling flooring systems
- reinforced flooring systems
- fiberglass-reinforced lining systems
- glass flake or mineral flake linings

## Special acid-proof paintings application

---

In order to guarantee a secured long-term protection of your structures, for each performed job, we track:

- Design function and structure service life
- Corrosiveness parameters of the external environment
- Surface cleaning and preparation
- Anti-corrosion paints used
- Performance conditions when applying anti-corrosive paints
- Staff health and safety
- Environmental protection
- Quality control and particular requirements for further maintenance

## Permanent services of repairs and maintenance for anti-corrosion protection plants and equipment

---

We provide a comprehensive array of maintenance and repair solutions.

We have the flexibility and resources to provide maintenance services through the world – according to our clients schedule and needs.

All our services are delivered by highly trained and experienced technicians. We take full responsibility for maximising the potential of all aspects of maintenance, from management to organization and execution.

# Certifications

---

B-Team Corrosion Protection execution competence is proven by the following certificates:

**ISO 9001- Certificate Nr. QC/1067** - Certificated management system for insulation systems, corrosion protection for equipment/ buildings and other special constructing works (insulation works, waterproofing, corrosion protection)

**ISO 14001:2005 – Certificate Nr. 01 104 1521080C** – Certificated environmental management system for industrial corrosion protection instalation based on rubber, embedding, plating and antacids painting

**ISO 18001:2005 – Certificate Nr. 01 213 1521080** – Certificated health management and occupational safety system for industrial corrosion protection works based on rubber-coating, embedding, plating antacids and painting

# Rubber lining application

# Metal confection execution and rubber lining for corrosion protection application

# High performance services

## Consulting

We value all features related to safety, functionality, usability, durability and cost.

We recommend the optimum technical solutions adapted to your requirements.

## Offer and planning

For each specific task, we develop an individual corrosion protection solution and plan, with a comprehensive range of services.

## Coatings and linings application

Our corrosion protection team includes highly trained specialists who are involved in both national and International projects

## Maintenance and Services

We will monitor the product installation at regular time intervals and recommend further optimization where appropriate.

You will benefit from structural integrity and continuous safety

We take pride in our customers and partners and, most of all, in fulfilling our commitments.
